EDUCATION

Wilfrid Laurier University

BSc Computer Science

Sept 2020 – June 2024

Waterloo, ON

EXPERIENCE

Mortgage Specialist

MCAP

May 2024 – Present

Waterloo, ON

- Developed and deployed complex SQL reporting scripts for multi-team CPU workflows, managing end-to-end delivery through SSIS/SSMS and automating scheduled execution via Visual Studio build jobs, in collaboration with the R&A team.
- Produced thousands of mortgage payout statements monthly with a 100% QA accuracy rating, coordinating with renewals, cash, discharge and other teams based on loan scenario.
- Owned macro development and maintenance for statements workflows, triaging issues, handling edge cases, and serving as the cross team bridge between mortgage operations and reporting infrastructure.

Technical Support Analyst

Transcom

May 2022 - Aug 2022

Milton, ON

- Resolved a high volume of diverse iOS support inquiries spanning account recovery, hardware, app, and billing issues, leveraging internal knowledge bases to troubleshoot complex cases.
- Developed customer facing troubleshooting documentation and reporting resources for front end staff, reducing average call handling time for complex inquiries from 12 to 8 minutes.

Data Systems Engineer

Wilfrid Laurier University

Sept 2020 – May 2023

Waterloo, ON

- Built REST APIs and backend services using Node.js and SQL in an Agile environment, with builds and deployments managed through Azure DevOps.
- Utilized MongoDB for event metadata storage that did not fit cleanly into SQL tables, enabling flexible and scalable data management.
- Implemented JWT authentication, bcrypt password hashing, and role-based access control with audit logging, aligned with AAA frameworks and OWASP best practices.

PROJECTS

Handoff - AI Powered Personal Website Builder

JavaScript, TypeScript, Node.js, MongoDB, Jest, Cypress, JMeter, Docker, Postman

adamcamilleri.com/handoff

Jan 2026 – Present

Personal Project

- Built an AI powered website builder where users describe their ideal site via the chat box and receive live, editable previews, using Groq (Llama 3.3) for design generation and Tailwind CSS for styling.
- Implemented full-stack architecture on cloud native serverless infrastructure (Vercel), with MongoDB for persistent user design storage.
- Implemented OAuth 2.0 with nonce validation, and built 4 stage shift left CI/CD pipeline (Jest unit, Cypress E2E, JMeter load testing) via GitHub Actions.

TaskMaster - Task Management App

Jun 2024 – Present

Next.js, React, TypeScript, Tailwind CSS, Node.js, MongoDB, JWT, Docker, Postman

Personal Project

adamcamilleri.com/taskmaster

- Built a multi-user REST API by scoping every MongoDB query to the authenticated user's ID, ensuring users can only read or modify their own tasks regardless of what task IDs they request.
- Containerized app and MongoDB with Docker Compose for consistent local and production environments, and documented all endpoints in a Postman collection.
- Designed component based UI with custom React hooks for optimistic state updates, synced against the REST API in real time.

Songdle - Daily Music Guessing Game

Jan 2026 – Present

JavaScript, HTML, CSS, YouTube Data API, Spotify API, Node.js

Personal Project

adamcamilleri.com/songdle

- Created a Wordle style daily music guessing game where players share the same song each day, with wrong guesses unlocking progressively longer audio clips across 6 rounds.
- Implemented a dual audio pipeline containing an iTunes preview proxy API for immediate playback and a YouTube IFrame API integration backed by a Node.js enrichment script that uses the YouTube Data API to match and store video IDs for 260+ songs.
- Engineered client side game state persistence via localStorage, autocomplete song search, genre tabs, artist filtering, hint system, and a shareable results grid, all in vanilla JS with no framework dependencies.

TECHNICAL SKILLS

- **Languages:** JavaScript, TypeScript, Python, SQL, VBA
- **Backend:** Node.js, Express, REST APIs, MongoDB, MySQL, SSMS, SSIS
- **Frontend:** React, Next.js, HTML, CSS
- **Developer Tools:** Git, Linux, Visual Studio, Azure DevOps, Docker, GitHub Copilot, Claude Code
